Course description
The course objective is to build student’s skills in developing visual ways to tell a science story with information and data. The activities and discussions will expand abilities to engage with and communicate science more effectively and improve their public science communication skills (general and technical). Students will practice many types of visualizations, and develop a final portfolio of visualizations, and deliver a presentation, relevant to a current research project. We will focus on scientific and non-scientific audiences. Participants in this course will:

- Explore and discuss bad, good, and better ways to visualize and communicate information and data to tell science stories effectively.
- Develop broader understanding and confidence with visualizing a range of types of data and data visualizations.
- Explore storytelling with data principles, design considerations, and visualization techniques/strategies to deliver the most effective science visuals alone and as part of an infographic.
- Engage in an authentic experience of designing and presenting science stories with data through visualizations and infographics to peers and scientists to apply gained skills and confidence.

Learning goals:
1. Students will be able to articulate the basic components of telling a story with data and how to present information visually.
2. Students will become more confident in developing a range of different visualizations, depending on the information available and message being conveyed.
3. Students will become more confident in developing a report, 1-pager, slide deck, slide doc, and infographic to communicate their story.
4. Students will be able to employ best practices of design and layout consideration when developing their visualizations.
5. Students will become more confident in presenting science stories with data to peers and other scientists.

Required texts
Reading materials will be made available on the Canvas course site.
Class protocol
Class begins promptly at 9:15 am. Be on time. If you have a conflict or an unavoidable reason to be late, please let me know in advance by phoning, texting or sending an email. Note that all papers (response papers, final paper) should use American Psychological Association formatting (http://libguides.rutgers.edu/writing).

Online Class protocol
If for some reason the connection (either yours to class or professor’s to class) is cut off, you are expected to sign back in or wait for the connection. If there is an ongoing issue with the professor’s connection, look for an email with instructions. If there is an ongoing issue with your connection, please email the professor at mnucci@sebs.rutgers.edu or text (with your name in the text body) to 908 963-9842.

Due dates
I will NOT accept late assignments unless you speak to me in person or by phone no later than 24 hours BEFORE the due date. NO email or text communications will be considered. I am here to help you learn the material in the class, so if you need extra time for a legitimate (e.g., illness, family emergency, religious observation) excused absence or reason I will work with you. However, note that repeated requests will not be allowed.

Academic Honor and Integrity
Plagiarism in any form will not be tolerated. This includes the improper citation of materials from any source, including the Internet. Rutgers University Policy on Academic Integrity considers cheating, fabrication, facilitation of academic dishonesty, plagiarism, and the denial of access to others of materials or information as violations of academic integrity. All violations will be dealt with according to the rules laid out in the policy which can be found at http://academicintegrity.rutgers.edu/, ranging from loss of class credit to expulsion depending on the level of the violation. The principles of academic integrity require that a student:

- properly acknowledge and cite all use of the ideas, results, or words of others.
- properly acknowledge all contributors to a given piece of work.
- make sure that all work submitted as his or her own in a course or other academic activity is produced without the aid of impermissible materials or impermissible collaboration.
- obtain all data or results by ethical means and report them accurately without suppressing any results inconsistent with his or her interpretation or conclusions.
- treat all other students in an ethical manner, respecting their integrity and right to pursue their educational goals without interference. This requires that a student neither facilitate academic dishonesty by others nor obstruct their academic progress.
- uphold the canons of the ethical or professional code of the profession for which he or she is preparing.

Adherence to these principles is necessary in order to ensure that
- everyone is given proper credit for his or her ideas, words, results, and other scholarly accomplishments.
• all student work is fairly evaluated, and no student has an inappropriate advantage over others.
• the academic and ethical development of all students is fostered.
• the reputation of the University for integrity in its teaching, research, and scholarship is maintained and enhanced.

Failure to uphold these principles of academic integrity threatens both the reputation of the University and the value of the degrees awarded to its students. Every member of the University community therefore bears a responsibility for ensuring that the highest standards of academic integrity are upheld.

Attendance
Rutgers students are expected to attend all scheduled course meetings. University policy excuses absences due to religious observance or participation in Rutgers-approved activities, and class, lab, or exam for any reason, you need to report your absence through the Absence Reporting Website https://sims.rutgers.edu/ssra/. The system will generate an email to me about your absence, but the University recommends that you also contact me directly to let me know of your absence.
